

The Unico System[®]

Small-Duct Central Heating & Air Conditioning

The Unico System is a small-duct, high-velocity central heating and air conditioning system designed for older homes or businesses that have inadequate air conditioning or none at all. Our system utilizes smaller supply ducts than traditional systems allowing them to snake throughout your home or business eliminating the need to add soffits or additional construction. Our modular units also make it easy to fit into attics, crawlspaces, closets, basements, etc., making it the system of choice for homeowners and professionals across the globe.

Fit Anywhere Air Handlers

Compact, modular coils and blowers fit into existing cavities and eliminate the need for space-eating mechanical areas. The Unico System air handlers can be installed horizontally or vertically for maximum flexibility.

Smaller Main Air Plenum

At 7", 9" or 10", our plenum sizes are much smaller than traditional systems. This provides more room for additional built space and allows the plenum to fit where a conventional system won't.

Flexible Supply Tubing

Available in either 2" or 2.5" (I.D. – Inside Diameter), our supply tubing is small enough to fit nearly anywhere. This makes it possible to design your HVAC system without having to add soffits or other construction add-ons.

Quiet Operation

Our supply tubing is made of spun-bond nylon, wrapped in sound dampening insulation for ultra-quiet operation.

Outdoor Unit

The Unico System can be paired with single or multi-stage refrigerant-based condensing units, air to water heat pumps, geothermal heat pump systems or chilled water systems.

Subtle, Blend in Outlets

No big, ugly metal vents. Our outlets are round or slotted, and with dozens of standard finishes — plus available custom finishes — they will fit any décor. Install in ceiling, floors or sidewalls.
