About Vertical Units

Homeowners seeking the quiet comfort of central air without sacrificing the style of their older or custom home have a small-space HVAC option for The Unico System with our vertical up-flow air handlers.

Designed to fit in closets and other small, concealed spaces, the units provide all of the comfort and installation benefits of The Unico System – including draft-free airflow, lower humidity and uniform room temperatures – in a compact size that's never taller than five feet.

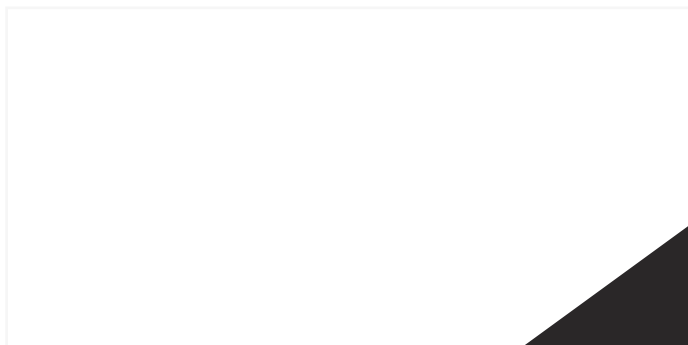

As with other air handlers from Unico, the new vertical units are designed for whisper-quiet performance. Each vertical unit is lined with sound-deadening insulation, muffling the sound and vibration of the all-in-one unit's blower and coils.

The vertical unit's compact size allows it to fit in just about any sized closet. The unit is a very compact 20" x 20" x 40".

The units are available in three sizes, requiring a simple connection to the ductwork and either a refrigerant or water line, with flexible mounting of the control box to the top, front or either side of the unit and compatible with most thermostats.
