

E-Coated Coils

Features and Benefits

- Increased efficiency and length of service
- Improves life of the coil by reducing possibility of leaks and coil failures
- Reduces maintenance, replacement and operating costs
- Provides excellent seacoast and salt environment protection.
- E-Coating available on All Heat Pump Coils and Coil Assemblies

System Advantages

- Reduces Formicary Corrosion
- Eliminates need to subcontract to third parties for coating
- Competitively Priced Versus “one-off or custom jobs”

About Unico

Since its inception in 1985, **Unico, Inc.** has dedicated itself to the production of quality products for the indoor comfort market. This dedication has made **Unico, Inc.** a leading innovator in superior heating and air conditioning products and, most notably, the small-duct market.

Unico, Inc. is the leader in Small-Duct High Velocity (SDHV) heating and cooling systems.

About E-Coated Coils

Unico System the leader in Small-Duct High Velocity HVAC systems is pleased to announce the addition of a line of Coated Coils to its robust line of evaporator coils. The "E-Coated Coils" from Unico maintain all the same specs as our existing line of non-coated coils and live up to the rigid quality standards in place for our portfolio of category leading coil products. No longer is there the need for the distributor or contractor to have to subcontract coils to a third party to have a coil coated, or to provide this level of service to the end user.

The portfolio of Unico E-Coated Coils is competitively priced and offers a tremendous value and savings compared to the added cost of having third parties provide the product on a "one-off" or custom basis. Unico has an "E-Coated Coil Option" available for all evaporator coil models in its current line. E-Coating improves the life of the coil by reducing the possibility of leaks and coil failures due to formicary corrosion.
